Iron and Human Disease is the first book to cover the three key aspects of human iron metabolism: the accumulation of iron in adults, iron as a limiting factor for tumor and infectious cell growth, and iron as a catalyst for oxygen free radical production.

~~Iron and Human Disease | Taylor & Francis Group~~

Iron is needed for bacterial growth making its bioavailability an important factor in controlling infection. Blood plasma as a result carries iron tightly bound to transferrin, which is taken up by cells by endocytosing transferrin, thus preventing its access to bacteria.

~~Iron deficiency - Wikipedia~~

Iron is both essential and toxic. The

File Type PDF Iron And Human Disease

authors review how the body absorbs, uses, and loses iron and explore both common and unusual causes of iron overload and treatment of the resulting disorders....

~~Iron overload in human disease.~~

The prevalence of iron deficiency in patients with other types of cancer ranges from 29% to 46%. The main causes of iron deficiency in people with cancer are anemia of chronic disease (discussed in the Iron and Health section below) and chemotherapy-induced anemia. However, chronic blood loss and deficiencies of other nutrients (due, for example, to cancer-induced anorexia) can exacerbate iron deficiency in this population.
