Software has become an essential enabler for science and the economy. Not only does it create new markets and the possibility of a more reliable, flexible and robust society, it also empowers our exploration of the world in ever increasing depth. However software often falls short of our expectations, with current methodologies, tools and techniques remaining insufficiently robust and reliable for constantly changing and evolving needs. This book presents papers from the 15th International Conference on New Trends in Intelligent Software Methodology Tools and Techniques (SoMeT 16), held in Larnaca, Cyprus, in September 2016. The SoMeT conference focuses on exploring the innovations, controversies and challenges facing the software engineering community, bringing together theory and experience to propose and evaluate solutions to software engineering problems with an emphasis on human-centric software methodologies, end-user development techniques, and emotional reasoning, for an optimally harmonized performance between the design tool and the user. The book is divided into six chapters covering the following areas: decision support systems; software methodologies and tools; requirement engineering; software for biomedicine and bioinformatics; software engineering models, and formal techniques for software representation; and intelligent software development and social networking. The book explores new trends and theories which illuminate the direction of developments in the field, and will be of interest to all in the software science community.

The CMOS (Complementary Metal Oxide Semiconductor) image sensor of a smartphone has been known for its sensitivity to gamma-rays. In this research, the four models of smartphones (Samsung Galaxy GT-S5570 mini, Samsung Galaxy SII, Samsung Galaxy SIII and Huawei Ascend P7) were selected and tested for measurement of gamma-rays emitted from Iridium-192, Cobalt-60 and Cesium-137 sources. During measurements, the phones were set in video mode while the camera lenses were covered with black adhesive tape to prevent light exposure. Interaction of gamma-rays with the CMOS clearly appeared as flashing bright spots on the dark background image. The bright spots were then counted by the freely available ImageJ software. Preliminary results indicated that the number of bright spots increased linearly with increasing gamma-ray dose rate from these three sources. Among these four models of smartphone, Huawei Ascend P7 gave the highest sensitivity and the second was Samsung Galaxy SIII. Then Huawei Ascend P7 and Samsung Galaxy SIII were calibrated and tested in measurement of gamma-ray dose rate in comparison with the known values and with the dose rate survey meter. The results were very satisfactory. Application software for Android smartphones was finally developed so that the number of bright spots could be simultaneously counted and converted to gamma-ray dose rate to display on the smartphones.

"An instant classic." —Arianna Huffington "Will inspire people from across the political spectrum." —Jonathan Haidt Longlisted for the Porchlight Business Book of the Year Award, an essential shortlist of leadership ideas for everyone who wants to do good in this world, from Jacqueline Novogratz, author of the New York Times bestseller The Blue Sweater and founder and CEO of Acumen. In 2001, when Jacqueline Novogratz founded Acumen, a global community of socially and environmentally responsible partners dedicated to changing the way the world tackles poverty, few had heard of impact investing—Acumen ' s practice of " doing well by doing good. " Nineteen years later, there ' s been a seismic shift in how corporate boards and other stakeholders evaluate businesses: impact investment is not only morally defensible but now also economically advantageous, even necessary. Still, it isn ' t easy to reach a success that includes profits as well as mutually favorable relationships with workers and the communities in which they live. So how can today ' s leaders, who often kick off their enterprises with high hopes and short timetables, navigate the challenges of poverty and war, of egos and impatience, which have stymied generations of investors who came before? Drawing on inspiring stories from change-makers around the world and on memories of her own most difficult experiences, Jacqueline divulges the most common leadership mistakes and the mind-sets needed to rise above them. The culmination of thirty years of work developing sustainable solutions for the problems of the poor, Manifesto for a Moral Revolution offers the perspectives necessary for all those—whether ascending the corporate ladder or bringing solar light to rural villages—who seek to leave this world better off than they found it.

A narrative account of the author's investigation into the world's economic gap describes her rediscovery of a blue sweater she had given away to Goodwill and found on a child in Rwanda, in a passionate call to action that relates her work as a venture capitalist on behalf of impoverished nations. Reprint.

This book views Samsung Electronics in terms of corporate life cycle as well as product portfolio and strategy. It also examines the issues Samsung faces as it proceeds further into the 21st century. Written from the perspective of an experienced commentator on Korean and global business, this book presents not simply a narrative or an adulatory and uncritical account of Samsung's rise, but a considered analysis of the secrets of success that both business students and CEOs will want to read and consider applying to their own companies.

This book constitutes the refereed proceedings of the Third International Conference on Convergent Cognitive Information Technologies, Convergent 2018, held in Moscow, Russia, in December 2018.
