Subducting plates, where one tectonic plate is being driven under another, are associated with volcanoes and earthquakes. This activity is focused along the edge of the plate boundary where two plates come into contact, forming regions such as the Pacific Ring of Fire – a chain

According to the theory of plate tectonics,
Earth is an active planet. Its surface is
composed of many individual plates that

move and interact, constantly changing
and reshaping Earth's outer layer.

Volcanoes and earthquakes both result
from the movement of tectonic plates.

boundaries and ...~~

Access Free Plate Tectonics Volcano And

Similar to earthquakes, volcanic activity is observed when the plates are divergent (move apart) or convergent (move towards each other). In such plate movements, the magma present in the plate boundaries may rise to the Earth ' s surface, leading to volcanic eruptions. Divergent plates may cause long volcanic rifts, whereas

Access Free Plate Tectonics Volcano And Earthquake Webquest

convergent plates result in individual
volcanic eruptions.
