of individual languages, language families, language groups, or language samples. Conclusions are the result of a deepened study of empirical data. Special emphasis is given to little-known languages, whose analysis may shed new light on long-standing problems in general linguistics.

The death penalty was unusual in medieval Europe until the twelfth century. From that moment on, it became a key instrument of rule in European society, and we can study it in the case of Catalonia through its rich and varied unpublished documentation. The death penalty was justified by Roman Law; accepted by Theology and Philosophy for the Common Good; and used by rulers as an instrument for social intimidation. The application of the death penalty followed a regular trial, and the status of the individual dictated the method of execution, reserving the fire for the worst crimes, as the Inquisition applied against the so-called heretics. The executions were public, and the authorities and the people shared the common goal of restoring the will of God which had been

broken by the executed person. The death penalty took an important place in the core of the medieval mind: people included executions in the jokes and popular narratives while the gallows filled the landscape fitting the jurisdictional limits and, also, showing rotten corpses to assert that the best way to rule and order the society is by terror. This book utilises previously unpublished archival sources to present a unique study on the death penalty in late Medieval Europe.

"Who Is God?" is a Bible Lesson Series that attempts to help the reader understand the character of God. Many people go through life knowing about God, but not fully knowing and understanding His true character. In these lessons, you will learn some of the names of God as they describe who God is and what He means in our lives.

This book covers pot-pollen—the other product, besides honey, stored in cerumen pots by Meliponini. Critical assessment is given of stingless bee and pot-pollen biodiversity in the Americas, Africa, Asia and Oceania. Topics addressed include historical biogeography, cultural knowledge, bee foraging behavior, pollination, ecological interactions, health applications,

microbiology, the natural history of bee nests, and chemical, bioactive and individual plant components in stored pollen. Pot-pollen maintains the livelihoods of stingless bees and provides many interesting biological products that are just now beginning to be understood. The Meliponini have developed particular nesting biologies, uses of building materials, and an architecture for pollen storage. Environmental windows provide optimal temperature and availability of pollen sources for success in plant pollination and pollen storage. Palynological composition and pollen taxonomy are used to assess stingless honey bee pollination services. Pollen processing with microorganisms in the nest modifies chemical composition and bioactivity, and confers nutraceutical benefits to the honey and pollen widely relished by native people. Humans have always used stingless bees. Yet, sustainable meliponiculture
